Rescue M.U.T.T.

A Rescue Multi-Use Technical Tool Anchor For When Life is on the Line.

Never Lets You Down

Rescue M.U.T.T. is a lineman fall-protection tool that mounts directly to utility poles. Within minutes, it creates a 5,000-pound-rated anchor point for rescue operations and emergency situations. Small yet powerful, it's an essential for every lineman's bag and every crew's truck.

Security When Your Life is on the Line

- ❖ Meets OSHA Best Practice on Wood Pole Fall Protection (effective 3/31/2011)
- ❖ Patented design made specifically for the Utility Industry
- ❖ Tough and durable even in the most adverse environments
- ❖ Can be installed quickly when rescue is critical
- ❖ Mounts using industry-standard, Kortick-style fasteners
- ❖ Rotating D-ring for ease of use and versatility
- ❖ Manufactured using high-strength steel and a galvanized finish

A Rescue Tool for Linemen

The Rescue M.U.T.T. is a pole-mounted anchor point that installs in minutes for lineman fall protection. Its easy installation and ability to be placed at any location on the pole make it a required tool for rescue operations and other emergency situations. Simply install the steel mounting plate with swiveling D-ring using two industry-standard Kortick-style, pound-in anchor bolts to create an OSHA compliant, 5,000-pound rated anchor point. Rescue M.U.T.T. is also versatile enough to meet the requirements for field rigging and hoisting.

Tough, Tested and Proven

Rescue M.U.T.T. is extremely strong, durable and functional even in the most adverse environments. We know because we designed and tested it to withstand storms, outages, emergencies, snow and other extreme conditions found in one of the world's most demanding industries. Engineered to meet or exceed current OSHA, ANSI and CSA requirements for fall protection and rescue, it features an ultimate breaking strength of more than 7,000 pounds. The patent-pending design has a vertically swiveling D-ring that moves with the worker and has a minimum 50-year work life. Because of the anchor's side-by-side bolts, the pole's integrity is not compromised. Rescue M.U.T.T.'s design permits it to be left in place permanently for the life of the pole.

Made in the USA

The design is simple and based on direct input from Utility Industry professionals, linemen and safety authorities. It has been engineered and manufactured to integrate seamlessly into the current environment, matching hardware and tools used on a daily basis. Rescue M.U.T.T. was invented, designed, tested and made in the USA to meet your needs.

Specifications

Material (mounting plate):	A36 – 3/16" steel hot-dipped galvanized
Material (D-ring):	Drop forged steel with di-chromate and hot-dipped galvanized finish
Strength (mounting plate):	7,000 pounds ultimate
Strength (D-ring):	5,000 pounds minimum breaking and proof tested to 3,600 pounds
Pull-Test Strength:	7,500 pounds with 2 ea. 5/8" X 6 Kortick bolts
Complies with:	OSHA, ANSI and CSA Standards
Mounting Hardware:	Minimum 5/8" X 4" Kortick-style pound-in screws
